

A 360° System of Support

Patient navigators provide support as you move through the full continuum of care, from detection and diagnosis to treatment and survivorship. They act as your personal guide educating, scheduling, and coordinating, as well as tracking outside consults, image studies, and labs to completion.

Support groups provide information, guidance, and unparalleled understanding of living through cancer. We focus on your psychological and emotional health during treatment, as well as offering access to numerous local and national support groups.

Laboratory services and access to molecular studies is an integral component of the detection, diagnosis, and treatment of cancer and hematologic disorders. We have an in-house accredited clinical laboratory staffed by certified lab professionals that allows physicians direct access to test results so they can prescribe or adjust treatment plans without delays. Most of all, it is convenient and easy for you.

Patient engagement is critical to helping you understand your individual case. At Virginia Cancer Specialists, you will have access to our patient portal, which includes secure messaging, prescription refills, lab results, scan and x-ray results, non urgent questions, and more.

Clinical trials and research help uncover new treatment options and give you the opportunity to receive newly developed therapies not yet available outside of the study. We are dedicated to advancing cancer care by leading and

participating in clinical trials that test the efficacy of new or modified treatments to improve patient outcomes.

Financial Counselors can answer questions about the cost of treatment and handle insurance processing. We recognize that everyone's situation is unique and will work with you to develop a plan.

Nutrition optimization before, during, and after cancer treatment can be an important way to take control of your well-being. We refer to registered dietitians who analyze your nutritional needs and design a personalized program to support your care.

Social Work Services A cancer diagnosis can be a shock to a patient impacting them emotionally and physically. Oncology Social Workers are part of the health care team that can assist patients and their loved ones with the challenges of a cancer diagnosis. Private and confidential consultations are available to patients and/ or family members.
